

KEY BENEFITS

- improved productivity
- employee safety
- higher flexibility
- process quality
- operational transparency

AutoMate the movement of goods

The labor shortages combined with need for efficiency and automation is making mobile robots a more relevant option now for warehouses as well as distribution and sorting centers.

Recognizing these trends K.Hartwall, has developed one of the most advanced intralogistics solutions in the “A-MATE”. The A-MATE is an example of a new generation mobile robot that can pick up loads both from the floor and from conveyor belts and transport them safely among other traffic to off-loading positions.

A-MATE®

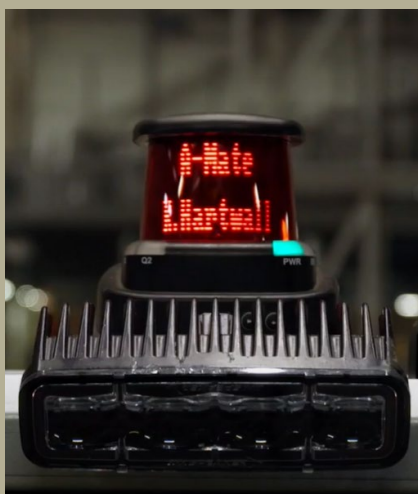

Pallet detection

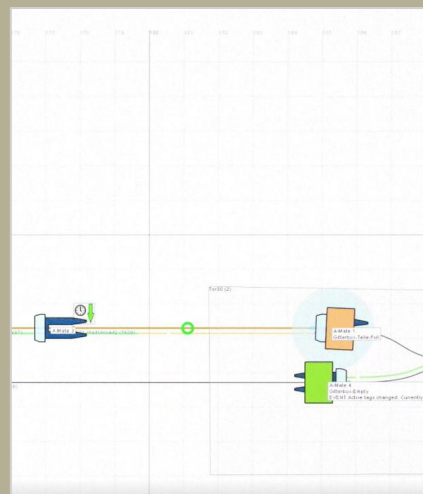

Omnidrive & Clear signalisation

User-friendly HMI screen

Multiple scanners for safety and navigation

Fleet management

Handles all types of load carriers
